Hi,

Please follow up with ORD on Monday, if we don't hear back today. NJ needs to be notified, but we need more information before we can do so.

Tx-Doug

Hi,

We need to close the loop on this today. If we notify the state we should be OK, as it appears the homeowners were notified.

**Subject:** WIIN Act Notification- New Jersey

Hello Doug and Sarah,

In order to comply with the WIIN Act requirements I am sending as much information as I was able to compile on two sequential water sampling sites within Newark, NJ (samples were not collected by EPA). Data from the two sequential sampling sites was shared with EPA by a consulting group on 9/27/18 at 9:35 am and EPA had a follow-up call with Newark Water and Sewer and their consultants later that afternoon. We communicated with those on the call the need to notify the residents of the two houses sampled of their results as soon as possible (and reiterated this in a follow-up email). The water system indicated that they may have already notified the residents as they were already aware of this data. They did confirm that the LSLs at those residences would be removed soon, potentially within the next week, and assured us they would check with the appropriate personnel to determine if residents were notified and if not to immediately notify the residents. I did provide them with the *Notice to Affected Household* sample template language.

I've attached the *Data Submission Forms* for both sampling sites and on the last page of each of the forms are the actual sampling results. The consultant conducted both total and soluble lead analyses and as you'll see the majority of the sequential samples were above 15 ppb. Once I garner the rest of the information required by this form (mainly the Analytical Results Information section) I will send another update. Please let me know if there's anything else that needs to be completed on my end of things, I'm not entirely sure from the reference sheet who is responsible for updating that *WIIN Event Tracking.xlsx* sheet.
